Summary

AI Engineer at AssistX Enterprise building retrieval, document-intelligence, and applied AI systems. MSc graduate with an IEEE publication on malaria detection and experience across Computer Vision, NLP, and Data Science. Work spans ingestion, model evaluation, operations tooling, and deployment.

Skills

AI Engineering: Python, PyTorch, Hugging Face Transformers, scikit-learn, TensorFlow, Keras, YOLOv8, OpenCV, ONNX
AI Applications: RAG systems, VLM/PDF ingestion, structured extraction, React, FastAPI, SQL, PostgreSQL
Evaluation & Delivery: Docker, MLflow, Jenkins, GitHub Actions, Apache Airflow, Flask, Git
Additional Tools: Power BI, Tableau, Plotly, Streamlit, Unity, Figma

Experience

AI Engineer Jan 2026 – Present
AssistX Enterprise

- Extended an enterprise RAG and agent-ingestion platform with VLM/PDF parsing, chunk normalization, parser batching, custom-node compatibility, and provider administration.
- Built document-review tooling and React console workflows for nested extraction, structured dataset views, and scoring-table filtering, sorting, and column selection.
- Built customer-intelligence workflows for tenant-scoped RFM/persona segmentation, explainable product eligibility, structured ingestion, privacy-safe previews, and observability.
- Hardened delivery paths with automated tests, Docker/Jenkins deployment updates, and server-side credential handling.

Research Assistant Sep 2025 – Dec 2025
Universitas Gadjah Mada, Remote Part Time

- Enhanced medical imagery and trained YOLOv11 models for an ongoing medical-imaging research project; further project details are confidential.

Data Scientist Trainee Oct 2024 – Mar 2025
Rakamin Academy, Remote

- Trained in SQL, Python, statistics, classical ML, deep learning, experiment tracking, and deployment-readiness documentation.
- Delivered an automated CV summarisation pipeline using NLP techniques to evaluate applicants on academic, social, and professional criteria.

Product Lead Jun 2022 – Dec 2023
JIWANA (Startup at UBIC Incubation), Yogyakarta, ID

- Directed the mental-health chatbot's roadmap, team coordination, conversational flows, and prototype experiments, translating user research into requirements.
- Represented the startup at incubation events, building partnerships and securing mentorship support.

Junior Game Developer 2021 – 2022
CreativeBox Tech

- Built Unity systems and backend logic for a virtual-reality education room using interactive digital-twin 3D objects.

Human Resource Development Staff Sep 2020 – Jun 2022
Ikatan Mahasiswa Indonesia Xiaozhuang (IMIX), Yogyakarta, ID

- Delivered technical and soft-skills programmes for student members; managed assessments, feedback, and community events.

Assistant Lecturer Sep 2019 – Sep 2020
Universitas Islam Indonesia, Yogyakarta, ID

- Held an assistant lecturer role alongside undergraduate study at Universitas Islam Indonesia.

Selected Projects

AssistX Suite Platform Engineering 2026 – Present

- Engineering contributions across retrieval, document intelligence, customer-intelligence workflows, and delivery tooling at AssistX Enterprise. Public product diagrams distinguish product context from my work; implementation details remain confidential.
- Case study: shafri.pages.dev/projects/enterprise-ai-platform

Malaria Parasite Stage Detection 2024 – Present

- Master thesis project creating assistive lab tooling with YOLOv8 & Faster R-CNN ensembles enhanced by LAB colour-space feature insertion.
- Improved mAP_{50} from 0.61 (RGB baseline) to 0.69, supporting species & life-stage detection for Plasmodium falciparum, vivax, malariae, and ovale.
- Exported models to ONNX and wrapped inference in a lightweight executable for deployment in clinics without Python stacks.

VisionServe: CIFAR-10 Inference API 2025

- Dockerised FastAPI demonstration serving CNN class probabilities and confidence scores, with reproducible training, versioned artefacts, and automated preprocessing, metrics, and QA exports.

Zero-shot Sentiment Intelligence Pipeline 2025

- Config-driven `facebook/bart-large-mnli` pipeline for sentiment trends, label shares, and confidence diagnostics without domain-specific fine-tuning; structured for API or batch use.

Education

Universitas Gadjah Mada Aug 2023 – Jul 2025

Master of Computer Science (GPA 3.73/4.00)
Thesis: Feature Insertion and Colour Space Transformation for Malaria Parasite Detection in Thin Blood Smear Images using YOLO & Faster R-CNN.

- Built research publication trend warehouse from Springer metadata to surface emerging topics with advanced visual analytics.
- Led hotel price trend mining across Booking.com, Traveloka, and Tiket.com via Octoparse; analysed pricing vs. city-centre proximity.

Nanjing Xiaozhuang University (NXU) 2020 – 2022

Double Degree Programme, Information Engineering (GPA 3.68/4.00)
Completed cross-cultural coursework in systems engineering, algorithms, and applied research collaboration.

Universitas Islam Indonesia Sep 2018 – Jun 2022

Bachelor of Computer Science (GPA 3.68/4.00)
Undergraduate thesis: Developed a serious game that teaches algorithmic thinking for secondary education.

Publications

Certifications & Scores

- TOEFL ITP – Score: 637 (ITC, Mar 2025)
- TPA Online – Score: 591 (Pusat Layanan Tes Indonesia, Jun 2025)
- Data Scientist Programme, Rakamin Academy – Completed Oct 2024 to Mar 2025
